

Damian Lapiha

Websites and Telegram bots for small businesses.

I build websites that bring in requests and bots that take routine off your hands. I handle all of it: design, code, server and domain. You get something that works, not a folder of files.

01 / SERVICES

What I do and what it costs

Price and deadline are agreed before work starts.

Landing page

One page about you or your service: works on phones and desktops, lead form, domain and hosting included.

from **€250**

1-4 days

Telegram bot

Requests, bookings, notifications, broadcasts, payment links. The bot runs on its own server.

from **€200**

2-5 days

Website with calculator and admin panel

Clients work out the price themselves and send a request. You change prices in the admin panel without a developer; requests arrive in Telegram.

from **€500**

4-7 days

Fixes and support

Changes to an existing site or bot, moving to a new server, domain and SSL.

from **€30**

from 1 day

Kat Cleaning LA

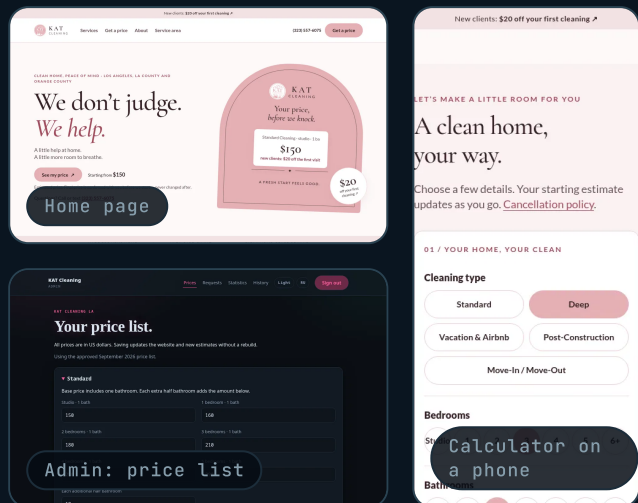

Cleaning company website · Los Angeles

In a minute a visitor sees what cleanings are offered and what they cost, builds an order in the calculator and sends a ready request instead of asking "hi, how much is it?".

- ◆ Calculator based on the real price list: cleaning type, bedrooms, bathrooms, square footage, add-ons
- ◆ The request opens WhatsApp with a ready message and lands as a card in the owner's private Telegram channel
- ◆ Admin panel: prices change without touching code, request list, statistics, history
- ◆ Spam protection without a captcha, so real clients never click anything extra

STACK Astro · TypeScript · React · Node.js · Telegram Bot API

OWN PRODUCT

HomeHunter

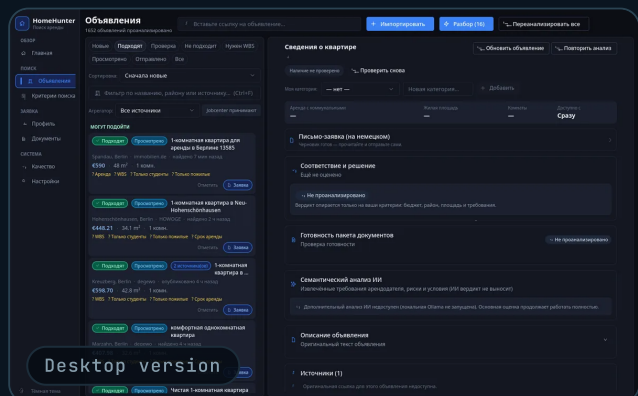

Telegram bot for finding flats in Germany

The bot reads housing sites by itself and within minutes sends flats that match each subscriber's criteria. It is public and has real users.

- ◆ More than 20 listing sources, search across all of Germany
- ◆ Each subscriber sets their own criteria; setup lives in a single message, no chat clutter
- ◆ Clear rules, not guesswork, decide whether a flat fits, so every verdict can be checked
- ◆ Landing page in 4 languages, monitoring, automatic deploys to the server

STACK Python · PostgreSQL · Telegram Bot API · Playwright · Docker

OWN PRODUCT

Chisel Blocks

Mobile game for Android and iOS

A block puzzle with two modes, levels, a shop, ads and in-app purchases. Built and prepared for release on Google Play.

STACK TypeScript · Phaser · Capacitor

OWN PRODUCT

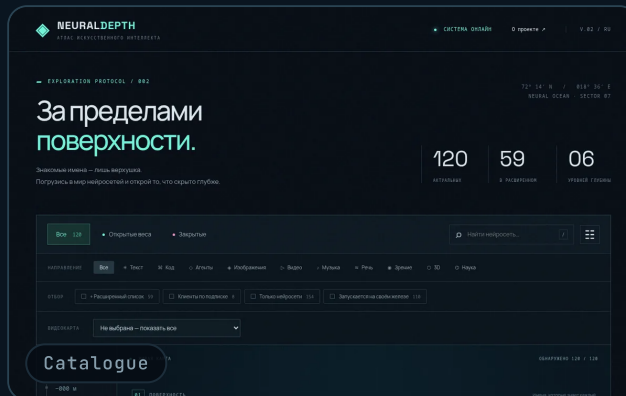

NeuralDepth

Interactive catalogue of AI models

About 180 models laid out as an iceberg by depth: filters by task and access type, search, and model picks for your own graphics card.

STACK JavaScript · HTML · CSS

ai.killu.studio

OWN PRODUCT

Bank statement converter

Desktop app for bookkeeping

Drop a PDF statement into the window and get an Excel table plus a check sheet showing whether the totals match what the bank printed. Reads PrivatBank, PUMB, Berliner Volksbank and PayPal.

STACK Python · Qt

03 / PROCESS

From first message to launch

01

Talk

You tell me on Telegram what you need. I ask the details and name a price and deadline.

02

Build

I share a work-in-progress link, so you can see how it moves.

03

Polish

We refine it on the live version, not on mock-ups.

04

Launch

Website on your domain with SSL, bot on a server. Everything runs without me.
